

You'd be surprised  
at the things  
Sally does around the office.

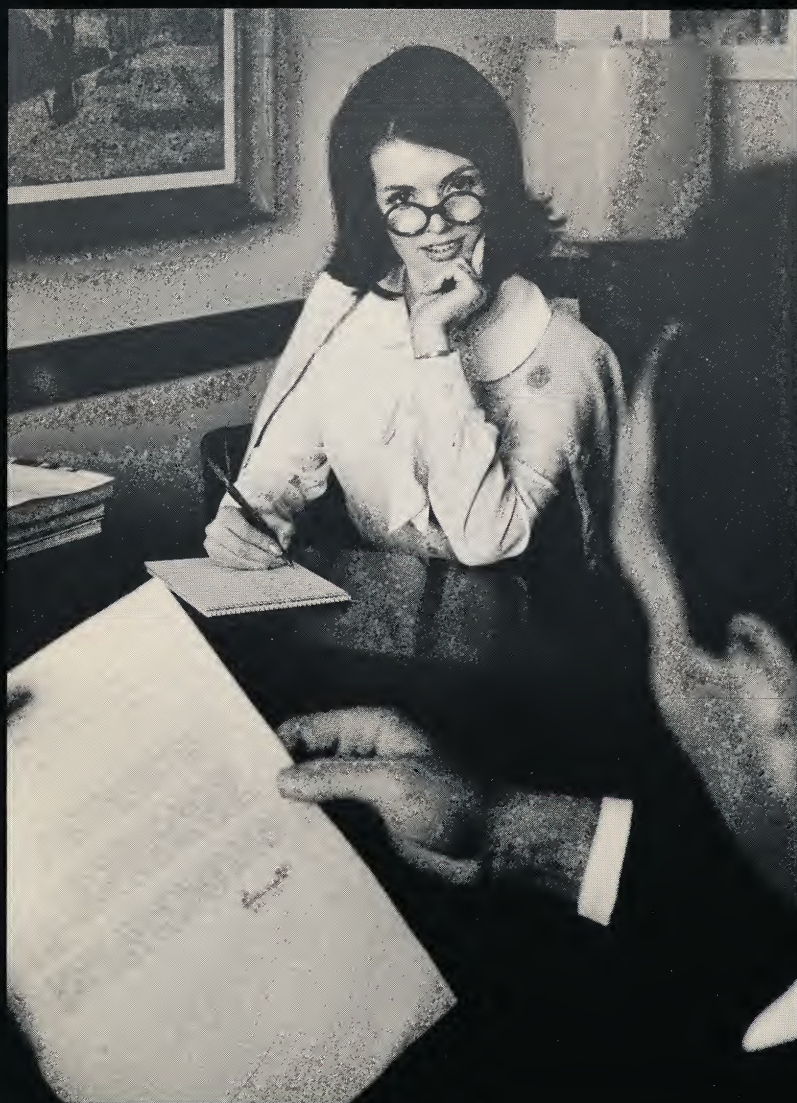

Sally brews a great cup of coffee (without which the office would never get started!)

She takes dictation faster'n her boss can talk . . .

Answers several dozen phone calls a day . . .

Finds a two-letter word meaning printer's measure . . .

Plays a mean hand of lunchtime bridge . . .

Discovers the memos he misplaced . . .

Previews his magazines . . .

And in her spare time, Sally processes microfilm with this new Sepratron®.

Sally learned how to operate the new Sepratron in no time at all. Now she can process 600 feet of 16mm or 35mm microfilm per hour—right in the office! Get a Sepratron and teach your girl how to process microfilm. It's fast, simple, trouble-free. Requires no plumbing—no water, no drain connections. You'll save enough on postage and processing fees to pay for the machine. Talk to your 3M representative today or write 3M Company.
